Smart Data Advisor

engineered by **cpa** engineers in motion

SWISS FLEXIBLE AUTOMATION SOLUTION

INDUSTRY 4.0
READY

The unlimited plateform for data visualisation and management

DESCRIPTION

The **Smart Data Advisor** platform is a tool for storing, analysing and displaying data from connected machines. The platform, installed on a local or remote server, allows real-time visualisation of the strategic data of your equipment or a set of machines. With this interconnected tool, you decide on what data you monitor, anywhere and on any medium. **The Smart Data Advisor** allows you to leverage machine data to create value, so improving your productivity.

ADVANTAGES

Interconnectivity
The platform can interconnect one or more machines.

Flexibility
The platform can run on a local (on-premise) or remote (cloud) server.

Tailored
The data selection and display are made according to your choice.

Modularity
Visualisation and analysis of data in real time.

Quality assurance
Email notification based on machine data.

Easy parameterisation
Large widget library simplifies the configuration of the platform.

Quick start
The deployment of the platform is quick and easy.

Service
Optional remote access to the machine.

engineered by

EXAMPLES OF APPLICATIONS

1 Supervision of a machine park

2 Real-time visualisation

3 Multiple display possibilities

TECHNICAL CHARACTERISTICS

Installation	on-premise (local server)
	cloud (AWS)
Visualisation	responsive platform (smartphone, tablet, screen, etc.)
Open solution	integration of additional services
	(deep learning for predictive maintenance)
Availability	exclusively on our CP Series equipment

SECURE CONNECTED ARCHITECTURE

Interconnected supervision   Local server or cloud   Notifications

CP Series
